

Mobile Entry

Wiring and Installation Manual

Installing the Mobile Entry Control Unit

1. Mount the Mobile Access control unit on a pillar close to the main gate controller.
2. Mark the wall for holes for mounting the enclosure.
3. Drill 2 holes and mount the enclosure.
4. Insert the two plastic bungs into the holes in the box to make the box water-tight.
5. Connect the unit as shown in the Wiring Diagram on the following pages.
6. Once all wiring is completed you **MUST** close the cable gland coming out of the Mobile Access unit. If it doesn't close water-tight around the cable then use some poly filler or similar to make the entry to the box water-tight.
